

## Unit 2: Directed numbers

### ▼ Important facts ▼

#### 1. Key terms

- ◆ directed numbers (向數), positive numbers (正數), zero (零), negative numbers (負數)
- ◆ positive sign (正號), negative sign (負號)
- ◆ ascending order (由小至大), descending order (由大至小)
- ◆ integer (整數)

#### 2. Addition and subtraction (加法和減法):

$$+(+b) = +b, +(-b) = -b, -(+b) = -b, -(-b) = +b$$

#### 3. Multiplication (乘法):

$$\begin{aligned} (+a) \times (+b) &= +ab, (+a) \times (-b) = -ab, \\ (-a) \times (+b) &= -ab, (-a) \times (-b) = +ab \end{aligned}$$

#### 4. Division (除法):

$$\frac{(+a)}{(+b)} = +\frac{a}{b}, \frac{(+a)}{(-b)} = -\frac{a}{b}, \frac{(-a)}{(+b)} = -\frac{a}{b}, \frac{(-a)}{(-b)} = +\frac{a}{b}$$

#### 5. Removing brackets

$$\begin{aligned} a + (b + c) &= a + b + c, a + (b - c) = a + b - c, \\ a - (b + c) &= a - b - c, a - (b - c) = a - b + c \end{aligned}$$

6. In mixed arithmetic operations, remove brackets first. Then do multiplication and division before addition and subtraction.

*Mathematics Exercises for Brilliancy 1 (2nd edition)***7. Powers (次方)**

- (a)  $(-1)^1 = -1$ ,  $(-1)^2 = +1$ ,  $(-1)^3 = -1$ ,  $(-1)^4 = +1$   
 $(-3)^1 = -3$ ,  $(-3)^2 = +(3^2)$ ,  $(-3)^3 = -(3^3)$ ,  $(-3)^4 = +(3^4)$   
 $(-1)^{2n} = +1$ ,  $(-1)^{2n+1} = -1$
- (b)  $(-3)^4 = (-3)(-3)(-3)(-3) = 3^4$ , but  
 $-3^4 = -(3 \times 3 \times 3 \times 3) = -81 \neq (-3)^4$

**8. Fractions (分數)**

$$-\frac{a}{b} = \frac{-a}{b} = \frac{a}{-b}; \quad -\frac{1}{3} + \frac{1}{2} = \frac{-2}{6} + \frac{3}{6} = \frac{-2+3}{6} = \frac{1}{6}$$

**9. Ordering numbers on a number line**

e.g.  $5 > 3$  but  $-5 < -3$ ;  $\frac{6}{7} > \frac{2}{7}$  but  $-\frac{6}{7} < -\frac{2}{7}$

**10. Comparing fractions**

e.g. Compare  $-\frac{13}{18}$  and  $-\frac{11}{15}$ .

The L.C.M. of the denominators is 90,

$$-\frac{13}{18} = -\frac{13 \times 5}{18 \times 5} = -\frac{65}{90}, \quad -\frac{11}{15} = -\frac{11 \times 6}{15 \times 6} = -\frac{66}{90}$$

$$\therefore -\frac{65}{90} > -\frac{66}{90}, \quad \therefore -\frac{13}{18} > -\frac{11}{15}$$

**(I) Warm-up items, No.1-20**

1. Fill in the blanks with the greater sign ( $>$ ) or the smaller sign ( $<$ ).

(a)  $-9$  \_\_\_\_\_  $-8$

(b)  $0$  \_\_\_\_\_  $-3$

(c)  $-\frac{2}{7}$  \_\_\_\_\_  $-\frac{2}{5}$

(d)  $-0.078$  \_\_\_\_\_  $-1.023$

2. Arrange each of the following sets of numbers in ascending order.

(a)  $9.99, -0.87, 13, -5, -8$

(b)  $-\frac{13}{7}, 1, 0, -2, \frac{8}{7}$

3. Arrange each of the following sets of numbers in descending order.

(a)  $-\frac{4}{5}, \frac{1}{2}, -\frac{5}{6}, \frac{4}{5}, \frac{5}{6}, -\frac{1}{2}$

(b)  $-\frac{13}{3}, -4, 3, -\frac{15}{4}, 2, -14$

*Mathematics Exercises for Brilliancy 1 (2nd edition)*

4. Evaluate:

(a)  $25 - 18 + 2$

(b)  $-42 - 19 - 39 + 21$

(c)  $(-17) - (-14) + (+17)$

(d)  $(+33) + (-15) - [(-4) + (+6)]$

(e)  $-11\frac{3}{4} + 12\frac{1}{3} + 5$

(f)  $9.34 - 15.17 - 4.66 + 2.53$

5. Evaluate:

(a)  $(+9) \times (-6) \div (-18)$

(b)  $\frac{(-4) \times (-3)}{(-6) \times 10}$

(c)  $\frac{2}{3} \times (-\frac{5}{8}) \div (-\frac{1}{6})$

(d)  $1.6 \times (-0.25) \div (-1.2) \times (-0.3)$

6. Fill in the missing numbers.

(a)  $(-19) + ( ) = 7$

(b)  $( ) - (-28) = -8$

(c)  $( ) \div (-4) = -15$

(d)  $( ) \times 6 = -10$

*Mathematics Exercises for Brilliancy 1 (2nd edition)*

7. Evaluate:

- (a)  $-36 \div [3 \times (-2 + 5)]$   
(b)  $(-10 - 15 + 13) \div 4 \times (-6)$   
(c)  $30 \div (-5) - [44 \div (-4) + 1]$   
(d)  $(7-9) \times [15 + (-18) \div (-6)]$

8. Evaluate:

- (a)  $-\frac{8}{3} \times \frac{5}{2} \div (-9) + 1$   
(b)  $(\frac{7}{4})(-\frac{2}{3}) + (-\frac{13}{24})(\frac{8}{39})$   
(c)  $\frac{(7-12) \times (-6)}{[-10 - (-8)] \times 10}$

9. Numerical substitution

- (a) If  $x = -3$ ,  $y = -5$ , find  $x^2 - 4y$ .  
(b) If  $a = -2$ ,  $b = -6$ , find  $ab + a^2$ .  
(c) If  $m = -\frac{1}{3}$ , find  $3m^2 + 2m - 4$ .  
(d) If  $x = -8$ ,  $y = \frac{2}{5}$ ,  $z = -3$ , find  $xy + yz + zx$ .

*Mathematics Exercises for Brilliancy 1 (2nd edition)*

10. The sum of a number and  $-26$  is  $-53$ . Find the number.
11. If the temperature changes from  $27^{\circ}\text{C}$  to  $-7^{\circ}\text{C}$ , what is the drop in  $^{\circ}\text{C}$ ?
12. Yesterday, the average temperature of Hong Kong was  $8^{\circ}\text{C}$ . It was  $12^{\circ}\text{C}$  higher than that of London. Find the temperature of Beijing if it was  $5^{\circ}\text{C}$  higher than that of London.
13. A submarine at  $150\text{ m}$  below sea level launches a rocket  $250\text{ m}$  above sea level. How high is the rocket above the submarine?
14. A shopkeeper gained  $\$80$  in selling an article but then lost  $\$150$  in selling another article. How much did he actually gain or lose?
15. In a mathematics test, students scored 2 marks for a correct answer,  $-2$  marks for a wrong answer and  $-1$  mark for not answering the question. If Andrew got 32 questions correct, 10 questions wrong and 8 questions unanswered, what was his score in the test?

*Mathematics Exercises for Brilliancy 1 (2nd edition)*

16.  $p, q$  are two numbers on the number line.  $p$  is 6 units from the left of  $-7$ , while  $q$  is 5 units from the right of  $-7$ . Find the values of:

(a)  $p - q$                       (b)  $p + q$

17. Find the values of the following.

(a)  $(-2)^3 \times 4 + 3$                       (b)  $[(-8) - (-6)]^4$

(c)  $4(-5)^3 \div (-15)^2$                       (d)  $(-6)^2 - (-2)^5$

(e)  $\frac{4}{\left(-\frac{1}{3}\right)^2}$

18. Find the values of the following.

(a)  $\left(3\frac{1}{2} - 7\frac{1}{6}\right) \div [-2^2 - \left(-\frac{2}{3}\right)^2]$

(b)  $-[5 - (-4 + 7)] \times (-6)^2 - (-2^2)$

(c)  $\frac{(-6)^2 - (10) + (-2)^3}{-(3^2)}$

19. Find the value of  $n$  if  $(3 + n)^3$  is equal to  $-1$ .

20. Evaluate  $(-1)^{2021} - (-1)^{2022}$ .

*Mathematics Exercises for Brilliancy 1 (2nd edition)***(II) Stimulating items, No. 21-32**

21. Find the values of the following.

$$(a) \quad -\left(1\frac{1}{2}\right)^2 \div \left[ \left(-\frac{1}{2}\right)^3 + \left(\frac{-0.5}{\frac{1}{2}}\right) \right]$$

$$(b) \quad \left(\frac{1.3}{-3.9}\right) - \left\{ \left(\frac{-3}{4}\right) - \left[ -\frac{1}{3} - \left(-\frac{1}{5} + 0.7\right)^2 \right] \right\}$$

22. Find the values of the following.

$$(a) \quad [(-3^4) - (-1)^3] \times \left[ \left(-3\frac{1}{2}\right) \times \left(-\frac{5}{14}\right) + \left(-\frac{4}{5}\right) \right]$$

$$(b) \quad \left[ 2\frac{1}{6} + \left(-2\frac{1}{4}\right) \right] \div \left( 0 - \frac{1}{3} \right) - \left[ 15 \div \left(-6\frac{2}{3}\right) \right]$$

23. Evaluate  $1 - \frac{1}{\left[ 1 - \frac{1}{1 - \left(\frac{1}{-3}\right)^2} \right]^3}$ .

*Mathematics Exercises for Brilliancy 1 (2nd edition)*

24. Given:  $a = -5$ ,  $b = -\frac{1}{4}$ ,  $c = 0.3$ ,  $d = -2$ ,  $e = 1$ . Find the value of each of the following expressions.

(a)  $\frac{(-d)(-e)}{-(c+ab)}$                       (b)  $\frac{-(bc-de)}{-(a)^2}$

25. Solve each of the following equations.

(a)  $\frac{x}{-25} - \left(\frac{-3}{10}\right)^2 = -\left(\frac{-1}{2}\right)^2$

(b)  $(0.75)\left(\frac{-2}{3}\right) - (0.8)(-0.625x) = (0.5)\left(\frac{-2}{3}\right)$

26. Evaluate:

(a)  $(99) \times (98) \times (97) \times \dots \times (-97) \times (-98) \times (-99)$

(b)  $(-1) + (+2) + (-3) + (+4) + \dots + (+50)$

27. Evaluate:

$\left(-1\frac{1}{2}\right) \times \left(+1\frac{1}{3}\right) \times \left(-1\frac{1}{4}\right) \times \left(+1\frac{1}{5}\right) \times \dots \times \left(-1\frac{1}{80}\right)$

28. Given  $y = x^2 + x^3 + \dots + x^{100}$ .

(a) What is the value of  $y$  when  $x = 1$ ?

(b) What is the value of  $y$  when  $x = -1$ ?

*Mathematics Exercises for Brilliancy 1 (2nd edition)*

29.  $a$ ,  $b$  and  $c$  are three different integers, and it is known that  $abc = 60$  and  $a + b + c = 10$ .
- (a) Explain why two of these three numbers must be negative numbers.
- (b) If  $a$  is the smallest number and  $b$  is the largest number, find the values of  $a$ ,  $b$  and  $c$ .
30. In a test, there were 50 multiple choice questions. 4 marks were awarded for each correct answer. However,  $-2$  marks were given for an unanswered question, and  $-3$  marks for an incorrect answer.
- (a) If a student left 5 questions unanswered, find the highest possible marks he might get.
- (b) If a student answered all the questions and got 123 marks in the test, find his percentage of correct answers.
31. In each of the following, state whether the given statement is always true. If it is not always true, explain by giving an example.
- (a) “ $-a$ ” must be a negative number.
- (b)  $-y$  and  $+y$  must be two different numbers.
- (c) If the product of two numbers is negative, then the two numbers must be of opposite signs.
- (d) If  $a$  is positive and  $b$  is negative, then “ $a - b$ ” must be positive.
- (e) If the sum of two numbers is positive, then both numbers must be positive.

*Mathematics Exercises for Brilliancy 1 (2nd edition)*

32. The table below shows the time differences between Hong Kong and some cities:

Bangkok	London	New York	Sydney	Tokyo	Vancouver
-1 h	$a$ h	-12 h	+2 h	+1 h	$b$ h

A positive time difference means the time in the city is ahead that of Hong Kong, while a negative time difference means the opposite, that is, behind that of Hong Kong.

- Calculate the time difference between New York and Sydney, and describe the difference in words.
- Find the time difference between Bangkok and London in terms of  $a$ .
- When Sydney is 7:00 p.m. on Thursday, London is 10:00 a.m. on Thursday. Find the value of  $a$ .
- When Hong Kong is 10:00 a.m. on Tuesday, Vancouver is 7:00 p.m. on Monday. Find the value of  $b$ .
- Find the time difference between Tokyo and Vancouver, and describe the difference in words.
  - It takes 14 hours to fly from Tokyo to Vancouver. If a person leaves Tokyo at 9:00 am on Friday, find the Vancouver time when he arrives at there.

*Mathematics Exercises for Brilliancy 1 (2nd edition)***(III) Exam practice, No. 33-44**

33. (a) Put the correct symbol '<' and '>' between the given numbers. (steps are not required for this question.)

(i)  $-8\frac{3}{4}$  \_\_\_\_\_  $-8\frac{7}{12}$

(ii)  $-15\frac{9}{17}$  \_\_\_\_\_  $-15\frac{7}{15}$

(iii)  $-2^3$  \_\_\_\_\_  $-2^4$

- (b) Arrange  $-8\frac{3}{4}$ ,  $-8\frac{7}{12}$ ,  $-15\frac{9}{17}$ ,  $-15\frac{7}{15}$ ,  $-2^3$ ,  $-2^4$  in descending order.

34. Write "T" if the statement is true and "F" if the statement is false.

- (a)  $-5.5$  is greater than  $-5.55$ .
- (b) The product of two negative numbers is always a negative number.
- (c) The sum of two negative numbers cannot be a positive number.
- (d) The difference of subtracting zero from an integer is the same as subtracting the integer from zero.

*Mathematics Exercises for Brilliancy 1 (2nd edition)*

35. In the figure,  $p$ ,  $q$  and  $r$  are three numbers on the number line. Which of the following must be true?

(i)  $q - p > 0$

(ii)  $\frac{q^2}{r} > 0$

(iii)  $\frac{p+q}{2} > q$

36. The average height of a group of students is  $x$  cm. The difference between the height of each student and the average height is recorded. The difference is negative if the student is shorter than the average. The table below shows the information about five of the students.

	Sophia	Winnie	Tom	Henry	Jason
Difference between student's height and the average height (cm)	+3	-5	+8	-4	-9

- (a) Who is the shortest student?
- (b) What is the height of Sophia in terms of  $x$ ?
- (c) Is Winnie taller or shorter than Henry? By how many cm?
- (d) If Tom is 161cm, what is the value of  $x$ ?

*Mathematics Exercises for Brilliancy 1 (2nd edition)*

37. Janny evaluated a given expression as follows:

$$\begin{aligned} & [(-4) - (-2)(+3)] \div (-2) + (-5) \\ = & [(-4) - (-6)] \div (-2) + (-5) \dots\dots\dots \text{Step 1} \\ = & [-4 + 6] \div (-2) + (-5) \dots\dots\dots \text{Step 2} \\ = & [-10] \div (-2) + (-5) \dots\dots\dots \text{Step 3} \\ = & (-5) + (-5) \dots\dots\dots \text{Step 4} \\ = & 0 \dots\dots\dots \text{Step 5} \end{aligned}$$

The first mistake was made in which step?  
 Explain briefly what's wrong with that step.

38. Evaluate:

- (a)  $(-3+2) - [(-9) + (-110) \div 55]$
- (b)  $-12 + (-8.5) \div [(-3.4) \div (-4)]$

39. Evaluate:

- (a)  $-11 \frac{7}{11} \times (-\frac{15}{64}) \times 2 \div (-11) \times 5 \frac{1}{24}$
- (b)  $\left[ \frac{2}{3} - (-\frac{3}{4}) \right] \div \frac{-1}{108} - 3 \times \left[ 5 + 8(-\frac{1}{4}) \right]$

*Mathematics Exercises for Brilliancy 1 (2nd edition)*

40. Calculate:

(a)  $-3 - \left[ -\frac{1}{3} - \frac{2}{3} \div (-6) \right] \div (-1.5) + 2$

(b)  $\left( 0.8 - \frac{6}{7} \right) \left( \frac{8}{9} - \frac{10}{11} \right) \div \frac{1}{-4.5} \times 25\frac{2}{3}$

41. Evaluate the following expressions.

(a)  $24 - 12 \times [2^3 + (-9)]^4 (-2)^2$

(b)  $\left[ -2 + \left( -\frac{2}{3} + 1 \right) \right]^2 \times \frac{-3^2}{2} \div \frac{(-5)^2}{-3}$

42. (a) Evaluate:

(i)  $(-7)^2 - 2(-7)(-6) + 6^2$

(ii)  $-(-2)^4 - (4)^2(-2) + 4(3)^2$

(b) Using the result of (a), evaluate:

$$\frac{(-7)^2 - 2(-7)(-6) + 6^2}{-(-2)^4 - (4)^2(-2) + 4(3)^2}$$

*Mathematics Exercises for Brilliancy 1 (2nd edition)*

43. There are 10 questions in a current affairs quiz. For each correct answer, 5 marks are awarded, and 2 marks are deducted for each incorrect answer. For unanswered questions, no marks will be awarded or deducted.
- (a) Find the highest score that a team can get in the quiz.
  - (b) Team A answered 6 questions correctly and did not answer 3 questions. Find the score of Team A.
  - (c) Is it possible for a team to score 48 marks in the quiz? Explain your answer.

*Mathematics Exercises for Brilliancy 1 (2nd edition)*

44. The normal temperature of an adult is about  $37.2^{\circ}\text{C}$ . When the body temperature rises due to illness, it is called a fever. A fever can be classified as:

- I. mild fever, which is from  $37.8^{\circ}\text{C}$  to  $38.8^{\circ}\text{C}$
- II. high fever, which is from  $38.9^{\circ}\text{C}$  to  $39.9^{\circ}\text{C}$
- III. very high fever, which is  $40.0^{\circ}\text{C}$  or above

One morning, the body temperature of a patient was measured to be  $38.2^{\circ}\text{C}$  at 8:00 a.m. Then his body temperatures were recorded every 30 minutes. The differences compared to every previous record were shown below (a positive difference refers to a rise in temperature):

Time	8:30 a.m.	9:00 a.m.	9:30 a.m.	10:00 a.m.	10:30 a.m.	11:00 a.m.	11:30 a.m.	12:00 noon
Change in body temperature ( $^{\circ}\text{C}$ )	+0.3	+0.5	+0.8	+0.3	-0.4	-0.7	-0.4	-0.2

- (a) What was the patient's body temperature at 8:30?
- (b) In which period of time was the patient's body temperature rising in that morning?
- (c) Did the patient ever have very high fever from 8:00 to noon? Explain your answer briefly.
- (d) The nurse said that the patient's body temperature at noon is lower than that at 8:30 a.m. Do you agree? Explain your answer briefly.
